EMERGENCY EYE AND BODY SHOWER
Technical Information

In compliance with: UNI9608 - UNI10271 - DIN 12899 part.2 - ANSI Z 358.1/2004 - EN 15154/1

Materials and construction methods, grant an appropriate flow-rate of ergoted water, as also a very good quality of the water, and a very good decontamination and cleaning of the body, and of the eyes. All the models are build using Steel, Brass, ABS, and the external finishing are epoxy powder coating, chemical nikel plating, and plastic, this just for grant a long life to the products also in very aggressive places. Eye showers have a flow rate total of 14 liters/minute (minimum required is 6 liters/minute), and the emergency showers have a flow rate of more than 120 liters/minute (minimum required is 100 liters/minute).

Emergency showers must be installed at a maximum distance of 7-8 meters from the acces point, and fair away from electricity sources. The emergency showers must be installed at an height between 2100mm. and 2300mm. from the floor (UNI norm 9608), and the eye showers must be installed at an height between 800mm. and 1150mm. from the floor (UNI norm 9608).

Water inlet temperature have to be between 15° and 35°, ad must be used in the beginning of the line a cleaner filter (UNI norm 9608).
